Abstracts

A linear array tray sealer is a specialized packaging machine used primarily in life sciences, pharmaceuticals, and food industries to hermetically seal trays containing products such as diagnostic assays, medical devices, reagents, or perishable goods. It employs a linear, sequential motion to transport trays through sealing stations where heat, pressure, or ultrasonic energy is applied to affix a lidding material—often foil, film, or breathable membranes—creating an airtight and contamination-resistant barrier. Key features include precision in seal integrity validation, compatibility with automation systems, adjustable parameters for diverse tray sizes and materials, and compliance with regulatory standards like ISO 13485 or cGMP, ensuring product safety and extending shelf life.

The global Linear Array Tray Sealer market size was estimated at USD 320.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
