Abstracts

Linear beam gas detector is a gas detection device designed based on the principle of light beam, which is widely used in large-scale industry, dangerous chemical leakage detection and fire safety. Unlike traditional point-type gas detectors, linear beam gas detectors monitor gas concentration by emitting and receiving a beam of infrared light or laser light. When gas exists in the beam path, it absorbs part of the light, changes the light intensity, and then measures the gas concentration according to the changed light intensity.

The global Linear Beam Gas Detector market size was estimated at USD 1062.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
