Report Overview

A Linear Guide (Linear rolling guide) allows a type of linear motion that utilizes rolling balls. By using circulating balls between the rail and the block, a Linear Guide can achieve high precision linear motion. Compared to a traditional slide, the coefficient of friction for a Linear Guide is only 1/50th. Because of the restraint effect between the rails and the blocks, Linear Guides can take up loads in both the up/down and the left/right directions. With these features, Linear Guides can greatly enhance moving accuracy; it is especially true when accompanied with precision ballscrews.

The global Linear Guide Rail market size was estimated at USD 2989 million in 2023 and is projected to reach USD 4366.01 million by 2032, exhibiting a CAGR of 4.30% during the forecast period.
