Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Linear Heat Detector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A linear heat detector is a temperature detection device used in fire alarm systems, typically consisting of a temperature-sensing cable. It detects fires by monitoring temperature changes and issues an alarm signal when the temperature exceeds a set threshold. It is suitable for locations requiring continuous temperature monitoring over large areas, such as tunnels, warehouses, and cable trenches. Compared to point-type detectors, linear heat detectors offer wider monitoring coverage. The future development trends of the global linear heat detector market are primarily in the following areas:

- 1. Intelligence and Integration** In the future, linear heat detectors will be upgraded to intelligent monitoring systems, incorporating AI algorithms for early fire warning and precise location. They will also be deeply integrated with building automation systems (such as BMS) to improve response efficiency.
- 2. New Materials and High-Precision Technologies** Distributed fiber sensing (DTS) replaces traditional temperature cables, enabling long-distance, high-resolution ($\pm 0.5^{\circ}\text{C}$) temperature measurement. This technology is suitable for emerging scenarios such as new energy warehouses and high-voltage cables.
- 3. Differentiated Growth in Regional Markets** Europe and the United States dominate high-end markets (such as nuclear power and chemical plants), while China is driving demand through infrastructure expansion (such as high-speed rail and data centers). Southeast Asia, due to stricter industrial safety regulations, is a promising region.

The global Linear Heat Detector market size was estimated at USD 3991.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10%

during the forecast period.
