Abstracts

Linear Magnetron is a kind of electric vacuum device based on multi-cavity traveling wave structure, whose core feature is energy conversion through the interaction of orthogonal electromagnetic field and traveling wave electromagnetic field. The anode is composed of a number of equally spaced resonators, and the electrons emitted by the cathode form a spiral motion trajectory under the action of orthogonal field, and synchronize with the traveling wave electromagnetic field in the resonator, converting the direct current energy into microwave energy efficiently.

The global Linear Magnetron market size was estimated at USD 134.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
