## Abstracts

A linear motor is an electric motor that has had its stator and rotor "unrolled" so that instead of producing a torque (rotation) it produces a linear force along its length. However, linear motors are not necessarily straight. Characteristically, a linear motor's active section has ends, whereas more conventional motors are arranged as a continuous loop. From the country's various industrial plans, to energy conservation and emission reduction requirements, to the manufacturing power strategy, motors as core components of various types of equipment are all areas that the country encourages development and focuses on supporting. In recent years, relevant national departments have successively issued a series of relevant policies to directly or indirectly support the development of the industry, provide a good macro-market environment for the development of the industry, and bring important strategic opportunities for the operation and development of enterprises. A significant development is the rapid adoption of ironless linear motors. These motors are lightweight and can produce high dynamic motion, making them more suitable for semiconductor, packaging and other general automation applications. In addition, since there is no iron core, there is no attraction or cogging force between the force-applying component and the magnetic track. For example, the DU series of ironless linear motors launched by Demart Intelligent Equipment can achieve high thrust and high acceleration, which makes them very suitable for high-dynamic applications with maximum stiffness relative to interference forces. Due to its working principle, ironless linear motors do not exert any attraction on the guidance system. The growing rate of high-performance industrial automation is fuelling the adoption of linear motors globally. Asia is regarded as the world's largest market for the deployment of industrial robots. China, Japan, and the Republic of Korea are significant markets for annual industrial automation installations in Asia Pacific. Such data indicates the region's growth of linear motors in the coming years. Asia-Pacific held a key market revenue share of the linear motor market, which

account for about 39%. Parker, Bosch Rexroth AG, Moog ranked top 3 of the revenue share in global market. Top 3 companies occupied about 20% market share.

The global Linear Motors market size was estimated at USD 319.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
