### Report Overview

Linear Pluggable Optics (LPO) is a term used in the context of optical networking to describe a form factor and interface standard for high-speed optical transceivers. LPO modules are designed to provide flexible and modular optical connectivity in networking equipment, such as switches and routers.

The concept of LPO emerged as a response to the need for a compact, hot-swappable, and interoperable form factor for high-speed optical transceivers. LPO modules are typically small in size and feature a pluggable design that allows for easy installation and removal without interrupting network operation.

LPO modules are commonly used in data centers, telecommunications networks, and other high-bandwidth applications where flexible and scalable optical connectivity is essential. They offer a modular approach to optical networking, allowing for easy upgrades, replacement, and scalability as network bandwidth requirements evolve.
