Abstracts

Linux-based Set Top Box is based on the Linux kernel and the operating system family of the same name to create a unique user experience. One of the pros of Linux-based devices is Product uniqueness, it gets a device with the interface and other components created specifically to suit their needs. It's also a benefit for the operator because the device can be developed for specific business requests: from the simple and inexpensive to a set-top box with a broad functionality, including integration with a specific CAS/DRM. The global market for Personal Video Recorders (PVRs) refers to the market for devices that allow individuals to record, store, and playback television content on their own schedule. PVRs have become increasingly popular in recent years due to their ability to give users greater control over their television viewing, and the ability to watch content at a time that is convenient for them. PVRs typically come equipped with a hard drive, which allows users to record and store large amounts of television content. These devices also come with features such as the ability to pause and rewind live television, as well as the ability to skip through commercials. The demand for PVRs is driven by the growth of the digital television industry, with more and more people switching to digital television services. Additionally, the rise of streaming services has also contributed to the growth of the PVR market, as they provide users with the ability to record and store content from streaming services as well. The global market for PVRs is highly competitive, with a large number of manufacturers and suppliers offering a range of products with different features and capabilities. Manufacturers are continuously developing new technologies and features to improve the performance, functionality, and ease-of-use of PVRs. One of the key trends in the global PVR market is the integration of PVR functionality into smart TVs and other digital devices. This trend is driven by the increasing popularity of smart home technologies and the desire for users to have a more seamless and integrated viewing experience.

The global Linux-based Set Top Box market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
