Report Overview

Lipofection reagent is a good alternative for the transfection of plasmid DNA into eukaryotic cells with a simplified protocol. For optimal results in a broader range of plasmid DNA transfection conditions, we suggest this reagent, because of its standard balance of potency and low-cytotoxicity. These nucleic acids can be delivered with the support of transfection reagents and nucleic acid, forming positively charged transfection complex and enabling cellular uptake. Transfection technique are widely used in huge development of gene therapies along with cancer research.
