Report Overview

Liposuction jars are medical devices used during liposuction procedures to collect and store fat and bodily fluids extracted from the patient. These jars are typically made of durable, transparent materials like polycarbonate or high-grade plastic, allowing medical professionals to monitor the volume and quality of aspirated material. They are designed to be sterile, single-use, or reusable (after proper sterilization), and often feature airtight seals, vacuum compatibility, and graduated markings for precise measurement. Some models include integrated filters to separate fat from fluids, ensuring efficient fat harvesting for procedures like fat transfer or grafting. The jars are a critical component in liposuction systems, ensuring safe and hygienic waste management while maintaining procedural accuracy.
