## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Liquefied Natural Gas Boil-Off Gas (LNG-BOG) Cryogenic Helium Extraction Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Liquefied Natural Gas (BOG) Cryogenic Helium Extraction Device reached 145 units, with an average selling price of US\$2.85 million per unit. This unit is a cryogenic separation system that recovers helium from boil-off gas (BOG) generated during LNG storage and transportation. Because some natural gas fields contain trace amounts of helium, the helium concentration in BOG increases during LNG liquefaction, storage, and transportation. This unit enables efficient separation and purification of helium from components such as methane at extremely low temperatures. This technology not only recovers high-value helium resources but also reduces the environmental and economic impact of direct BOG emissions, thereby increasing the added value of the entire LNG industry chain.

The global Liquefied Natural Gas Boil-Off Gas (LNG-BOG) Cryogenic Helium Extraction Device market size was estimated at USD 413.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
