## Abstracts

Liquid Air Energy Storage (LAES) uses electricity to cool air until it liquefies, stores the liquid air in a tank, brings the liquid air back to a gaseous state (by exposure to ambient air or with waste heat from an industrial process) and uses that gas to turn a turbine and generate electricity. LAES systems use off the shelf components with long lifetimes (30 years +), resulting in low technology risk. Global Liquid Air Energy Storage Systems key players include GE, Highview Power, Linde, Messer, etc. In terms of application, the largest application is Power plant, followed by Utility scale, etc. North America is the largest market, with a share about 52%, followed by Europe with the share about 43%.
