## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Liquid-based Thin-layer Cell Preservation Medium competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Liquid-based thin-layer cell preservation solution is a fixation and preservation medium specifically designed for liquid-based thin-layer cytology examinations (such as TCT and LBC). After collecting exfoliated cells from the cervix or other sites, the sampling brush is immediately immersed in the preservation solution. The solution rapidly fixes cells, inhibits cell autolysis and bacterial growth, and effectively reduces interference from blood, mucus, and impurities, while maintaining clear cell morphology and structural integrity. This preservation solution also keeps samples stable for a longer period, facilitating subsequent automated thin-layer slide preparation, staining, and pathological diagnosis, improving the sensitivity and accuracy of detection, and is an important component of modern cytology screening. 2024 sales volume was 140 million units, with an average price of \$5, single-line production capacity of 15 million units, and a gross profit margin of 45%. From a market perspective, the demand for liquid-based thin-layer cell preservation solutions continues to grow, mainly driven by factors such as the promotion of cervical cancer screening, the increasing automation of medical institutions, and the enhanced health awareness of the population. As TCT testing becomes a routine gynecological procedure, the demand for high-quality, highly stable preservation solutions is constantly expanding in hospitals at all levels, health check-up centers, and third-party testing institutions. At the same time, increased government investment in "two cancers screening" and primary public health services has further promoted the penetration rate of liquid-based cell preservation solutions in the primary market. On the other hand, market competition is

also gradually intensifying. International brands have a strong advantage in high-end products and stability, while domestic companies are rapidly expanding thanks to cost advantages, supply chain flexibility, and localized services. Future market trends are moving towards "higher stability, lower impurity interference, and stronger compatibility with automated film-making equipment," while innovative directions such as environmentally friendly preservation solutions and formaldehyde-free or low-toxicity formulas are also emerging. Therefore, whoever can establish barriers in product safety, quality consistency, and large-scale supply will gain a more advantageous position in the competition.

The global Liquid-based Thin-layer Cell Preservation Medium market size was estimated at USD 700.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
