Abstracts

Liquid Bioinsecticides are a form of biopesticide that comes in liquid form, designed to control insect populations through biological means rather than synthetic chemicals. These bioinsecticides use naturally occurring organisms or biological derivatives, such as bacteria, fungi, viruses, or plant extracts, to target specific pests. Liquid bioinsecticides are often favored in integrated pest management (IPM) systems because they reduce the risk of chemical resistance in pest populations, are generally safer for non-target species, and minimize environmental impact.

The global Liquid Bioinsecticides market size was estimated at USD 1316.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.50% during the forecast period.
