Abstracts

Liquid carton packaging, also known as aseptic or gable-top packaging, refers to multi-layered, shelf-stable containers primarily used for the storage and distribution of liquid food and beverage products such as milk, juice, soup, wine, and plant-based alternatives. These packages are typically constructed from paperboard laminated with polyethylene and aluminum foil layers, which provide barrier properties against light, oxygen, and moisture, thereby extending product shelf life without refrigeration until opened. Designed for efficiency in transportation, storage, and recycling, liquid cartons are available in various shapes, sizes, and opening mechanisms, balancing functionality with sustainability considerations due to their renewable material composition and lightweight nature.

The global Liquid Carton Packaging market size was estimated at USD 4560.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
