Abstracts

A system for automatic and semi-automatic mixing of chemical solutions and the delivery thereof to a utilization system. A solution vehicle, such as water, and liquid chemical additives are delivered to a solution preparation tank. Sensors in the tank determine when the tank is empty and full, and the temperature of the contents. This information is used to operate an automatic tank control system which controls the delivery of ingredients and of heat to the tank, and the emptying of the tank contents. Alternatively, the emptying function may be controlled manually. By the use of a plurality of solution preparation tanks and respective control systems, together with a sequencing control system, continuous output flow of mixed solution may be obtained. Industrial policy support will ensure rapid development of the industry
