## Abstracts

A liquid cooling center is a central part of a liquid - cooling system. In various applications such as high - performance computers, industrial machinery, or automotive engines, it serves as a hub that manages the flow, temperature, and pressure of the coolant liquid. It typically contains components like pumps to circulate the liquid, radiators to dissipate heat, and reservoirs to store the coolant. A quick - disconnect is a mechanism that allows for the easy and rapid connection and disconnection of two parts of a liquid - cooling system without the need for complex tools or procedures. It typically consists of two mating parts, one male and one female, that can be joined together to create a leak - proof seal for the coolant flow. This feature offers several advantages. In maintenance scenarios, it enables technicians to quickly access and replace components such as pumps or radiators. For example, if a pump in a liquid - cooled server fails, the quick - disconnect allows for a fast replacement, minimizing downtime. It also simplifies the installation process, making it easier for users to set up or modify their liquid - cooling systems.

The global Liquid Cooling Center Universal Quick Disconnect market size was estimated at USD 501.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 27.10% during the forecast period.
