Abstracts

Charging modules are important components in electric vehicle charging piles. They can be divided into air-cooled charging modules and liquid-cooled charging modules according to different cooling methods. Among them, air cooling is a relatively popular device in the market. However, under the premise of increasing the power of fast charging stations and widespread popularity in the future, traditional air cooling cannot meet the heat dissipation needs. Liquid cooling can meet the heat dissipation needs of high-power (?30kW) charging modules, and the overall cost of liquid cooling is not high, and its lifespan can be as long as ten years or more, which is beneficial to increasing operators' profits. Globally, the main liquid-cooled charging module companies are Shenzhen Infypower, Shenzhen Honor Electronic, Shenzhen Increase Technology, Shenzhen UUGreenPower Electrical. Most companies have launched liquid-cooled modules not long ago. In the future, as downstream demand grows, liquid-cooled charging modules will become a mainstream device.

The global Liquid Cooling Charger Module market size was estimated at USD 325.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 32.60% during the forecast period.
