Abstracts

Liquid crystal smart glass, also known as switchable glass or privacy glass, is a technologically advanced glazing material that can dynamically alter its light transmission properties in response to an electrical stimulus; it consists of a thin layer of liquid crystal molecules sandwiched between two layers of conductive material and transparent substrates, which, when powered, align to allow light to pass through (transparent state), and when unpowered, scatter light to create an opaque, frosted appearance (translucent or private state), offering on-demand privacy, glare control, and energy efficiency without the need for physical blinds or curtains.
