Report Overview

Liquid Delivery Equipment Gear Pumps is a rotary pump that relies on the change and movement of the working volume formed between the pump cylinder and the meshing gear to convey or pressurize the liquid. Two closed spaces are composed of two gears, pump body and front and rear covers. When the gears rotate, the volume of the space on the side of the gear disengagement increases from small to large, forming a vacuum, sucking the liquid, and the volume of the space on the meshing side of the gears changes from large to large. small, and squeeze the liquid into the pipeline.
