## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Liquid Metal Bearing (LMB) CT Tubes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. As the core device for generating X-rays in CT equipment, the CT tube generates X-rays by accelerating high-energy electrons to bombard the anode target. The tube is one of the core components of medical CT and is known as the "core" of CT, accounting for about 20% of the BOM cost of the entire CT machine. This product has the "six high" characteristics of high vacuum, high heat, high rotation, high voltage, high power, and high centrifugal force. Therefore, it has high requirements for research and development, design, and manufacturing, and has extremely high industry barriers. However, this type of component has only a limited working life and is often regarded as a high-value medical consumable.

The global Liquid Metal Bearing (LMB) CT Tubes market size was estimated at USD 2149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
