Abstracts

Liquid metal thermal interface materials are made of liquid metal and are used to improve thermal conductivity and reduce thermal resistance. Liquid metal thermal interface materials usually have a higher thermal conductivity than other traditional thermal interface materials, and can quickly transfer heat and improve heat dissipation efficiency. They have a high melting point and can work stably for a long time in a high temperature environment without being damaged by temperature increases. They can evenly wet the surface of the heat source and the heat sink, increasing the contact area and thermal conduction efficiency of the thermal interface.
