Abstracts

A liquid nitrogen vacuum trap is a device that utilizes the low-temperature properties of liquid nitrogen to capture and condense gases or vapors in vacuum systems. It is commonly employed in high and ultra-high vacuum systems to remove water vapor, oil vapor, or other volatile substances, thereby improving the vacuum level and system stability. The trap consists of an inner container filled with liquid nitrogen, which lowers the surface temperature to -196°C , enabling gas condensation. Liquid nitrogen vacuum traps are widely used in semiconductor manufacturing, chemical experiments, freeze-drying processes, and biological sample preparation, effectively preventing contamination and enhancing the accuracy of experiments or production processes.

The global Liquid Nitrogen Vacuum Traps market size was estimated at USD 56.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
