Abstracts

Liquid nonionic surfactants are surface-active agents characterized by their non-ionic, hydrophilic head groups, typically derived from ethylene oxide or propylene oxide chains, which render them soluble in water without dissociating into ions. These compounds function by reducing surface tension between liquids or between a liquid and a solid, making them essential in formulations requiring stability, emulsification, detergency, and foam control across a wide pH range and in the presence of electrolytes. Their liquid state offers practical advantages in handling, mixing, and dosing within industrial processes, distinguishing them from solid or paste forms of surfactants while maintaining key properties such as biodegradability, low toxicity, and compatibility with other ionic and nonionic surfactants.

The global Liquid Nonionic Surfactant market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
