Report Overview

The liquid phase homogenizer uses high-speed mechanical shear to fully disperse the liquid grease into small droplets, which helps the emulsifier to fully wrap the grease or moisture to form relatively fine emulsified particles, which helps the stability of the product. Secondly, in products containing high-molecular polymers, homogenization is usually used, and the colloid can be dispersed through the homogenizer, so that it can have a better dispersion effect. Of course, washing products and elastomers and powders. The same is true, homogenizers can make them more uniformly dispersed in the product, more fully dissolved, and better for detection.
