Abstracts

Liquid restaking is a further extension of liquidity staking, allowing users to stake liquidity tokens (LST) again in other protocols or networks to obtain additional returns or participate in the security maintenance of other networks. This mechanism is usually used in cross-chain or multi-layer network scenarios. Liquid restaking is an exciting and innovative concept that offers the potential to unlock significant value for users who wish to maximize the utility of their staked assets. By allowing users to earn additional rewards and participate in multiple blockchain ecosystems, liquid restaking enhances capital efficiency, flexibility, and reward generation. However, like any emerging technology, it comes with its own set of complexities and risks.
