Abstracts

Liquid sorbitol is a colorless, transparent, viscous liquid with a slight sweetness. Sorbitol can be widely used in industries such as medicine, light industry, food, and chemical industry. The pharmaceutical industry mainly uses it as a raw material for producing vitamin C, while the light industry uses it as a raw material for surfactants. Sorbitol has good moisturizing properties and can replace glycerol as a moisturizing agent in the production of toothpaste, cigarettes, and cosmetics; In the food industry, sorbitol is a sweetener that has hygroscopicity, preventing food from drying out and maintaining freshness and softness; It does not cause blood sugar to rise, and can be used as a sweetener and nutrient to produce special food for diabetics; Adding sorbitol to concentrated milk can extend its shelf life, and has a significant stabilizing and long-term preservation effect on fish sauce, jam, and candied fruits, which can improve the color, aroma, and taste of sausages; In the chemical industry, sorbitol fatty acids replace sesame oil, and sorbitol rosin esters are commonly used as raw materials for building coatings.
