Abstracts

Lisdexamfetamine dimesylate is a prodrug stimulant medication primarily indicated for the treatment of attention-deficit/hyperactivity disorder (ADHD) in both children and adults, as well as for moderate to severe binge eating disorder (BED). It functions as a central nervous system stimulant that is metabolized in the body to dextroamphetamine, which increases the levels of neurotransmitters such as dopamine and norepinephrine in the brain, thereby improving focus, attention, and impulse control. Marketed under brand names such as Vyvanse (and its generics following recent patent expirations), it is distinguished by its prodrug design, which provides a smoother onset and longer duration of action compared to immediate-release amphetamines, potentially reducing abuse liability and offering more consistent symptom management. The market for lisdexamfetamine dimesylate is substantial and continues to grow, driven by increasing global diagnosis rates of ADHD and greater awareness and treatment of binge eating disorder. Key markets include North America, particularly the United States, where it has been a top-prescribed medication in its class, followed by Europe and other developed regions where regulatory approvals have expanded. The recent introduction of generic versions has intensified competition, leading to price pressures but also broadening access, especially in cost-sensitive healthcare systems. Market dynamics are influenced by factors such as evolving clinical guidelines, managed care formulary placements, and ongoing research into new indications or formulations. Despite generic entry, brand loyalty and physician preference for its specific pharmacokinetic profile help sustain a significant branded segment, while manufacturers focus on lifecycle management strategies, including authorized generics and potential new delivery systems. The overall market remains robust, supported by persistent demand and the chronic nature of the conditions it treats.

The global Lisdexamfetamine Dimesylate market size was estimated at USD 5016.75

million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
