The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Argyrodite Sulfide Electrolytes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lithium Argyrodite Sulfide Electrolytes are a class of solid-state lithium-ion conductors with the general formula $\text{Li}_x\text{PS}_4\text{X}$, where X is typically a halide such as Cl, Br, or I. These materials adopt the argyrodite crystal structure and are renowned for their high lithium-ion conductivity (up to $\sim 10^{-2}$ S/cm), low activation energy, and mechanical softness, which allows easy pressing into solid electrolyte layers without sintering. Primarily used in all-solid-state lithium batteries (ASSLBs), they offer good electrochemical performance and are compatible with various cathodes and lithium metal anodes, especially when surface modifications are applied. Despite their advantages, they are sensitive to moisture and air, releasing toxic hydrogen sulfide gas upon exposure, necessitating careful handling in inert environments.

The global Lithium Argyrodite Sulfide Electrolytes market size was estimated at USD 337.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.70% during the forecast period.
