Lithium batteries have been widely applied in many uses to date, including telecommunications, national power grids and other networked systems. These network power applications require higher standards on batteries: higher energy density, more compact dimensions, longer service times, easier maintenance, improved high temperature stability, a lighter weight, and a higher reliability. With the advent of the 5G network era, the storage base station energy storage has once again stirred the lithium battery market. 5G is a key and cross-age technology that opens the era of the Internet of Everything, and all countries are grabbing market share. The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly. China is a leader in 5G technology. According to the latest statistics from the Ministry of Industry and Information Technology, China newly added 887,000 5G base stations in 2022 (currently reaching 2.312 million, accounting for more than 60% of the world's total), and 110 cities in China have reached gigabit city construction standard. According to the Digital China Development Report (2022) released by the State Internet Information Office, by the end of 2022, China had built a total of 2.312 million 5G base stations, with 561 million 5G users, accounting for more than 60% of the world.

The global Lithium Battery for Communication Base Stations market size was estimated at USD 3929.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
