Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Battery Binders competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lithium battery binders are polymer materials used to hold together the active particles, conductive additives, and other components within the electrodes of a lithium-ion battery, ensuring mechanical stability and electrical integrity during charge-discharge cycles. They act like a "glue" that adheres the electrode materials to the current collector while maintaining flexibility, adhesion, and chemical resistance in harsh electrochemical environments. Common binder types include PVDF (polyvinylidene fluoride) for cathodes and SBR/CMC (styrene-butadiene rubber with carboxymethyl cellulose) for anodes, with newer water-based and high-performance binders emerging to improve energy density, cycling life, fast-charging capability, and sustainability. Binders, though used in small quantities, play a critical role in determining electrode performance, durability, and manufacturability. Lithium battery binders can be classified into oil-based binders and water-based binders according to the properties of the dispersion medium. Currently, the most widely used oil-based binder is polyvinylidene fluoride (PVDF), while water-based binders mainly include styrene-butadiene rubber (SBR) emulsions and carboxymethyl cellulose (CMC). In addition, water-based binders such as polyacrylic acid (PAA), polyacrylonitrile (PAN), and polyacrylates also occupy a certain market share. The shipment volume is approximately 120,000 tons. In terms of price, the current unit price for CMC is \$2.8-6,000/ton, SBR is \$28-70,000/ton, PAA is \$20-30,000/ton, and PVDF is approximately \$9,000/ton.

The global Lithium Battery Binders market size was estimated at USD 1358.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10%

during the forecast period.
