## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Battery Defoamer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lithium battery defoamers are highly effective additives specifically designed for use in the lithium battery production process. They are primarily used in electrode slurry mixing, coating, roller pressing, and electrolyte injection processes, effectively suppressing or eliminating bubbles generated by mixing high-viscosity materials or flowing liquids. Core ingredients include silicones, polyethers, or modified silicone oils, which exhibit excellent dispersibility, low surface tension, and compatibility with battery material systems. These defoamers prevent problems such as coating defects, uneven electrode interfaces, increased internal resistance, and decreased cycle life caused by residual bubbles, without compromising electrochemical performance. They are key auxiliary materials for ensuring the consistency, safety, and production yield of lithium batteries. In 2024, the global production of lithium battery defoaming agents will reach 108,040 tons, with an average selling price of US\$1,738 per ton.

The global Lithium Battery Defoamer market size was estimated at USD 188.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
