Report Overview:

The main function of the lithium battery leak detection equipment is to detect the air tightness of the battery cell. The tightness of the battery shell directly determines the safety performance of the battery. Therefore, the detection equipment plays an important role in the safety of the lithium battery. Helium detection is to use helium mass spectrometer to vacuum the welded electric core (containing trace helium) under vacuum environment, detect the gas extracted from the electric core, judge the sealing of the electric core, and screen out unqualified electric cores. From the perspective of product quality improvement, the battery factory will pay more attention to the helium inspection process, and also put forward higher requirements for helium inspection equipment. It is expected that the helium inspection equipment market will grow rapidly in the next five years.
