Report Overview

The recycling system of Lithium Battery Recycling Equipment is simple and reliable, in which the required equipment includes pre-shredder, conveyor, crusher, material disperser, negative pressure extraction device and sorting device. The discharge port of the conveyor is equipped with a magnetic separator, which can use magnetism to screen out the iron contained in the lithium battery. Through the specific gravity sorter, the copper and aluminum in the lithium battery can be screened out by using the difference of copper and aluminum density. The diaphragm of the lithium battery after crushing can be extracted from the plastic diaphragm of the lithium battery through the negative pressure pumping system. At the same time, the black powder attached to the diaphragm can be separated and discharged at one time in another outlet of the sorting device, into another disc vibrating screen for black powder sieving work. The whole process of continuous sorting and sieving achieves the recovery of black powder, aluminum and diaphragm separately and with a high degree of automation.
