Report Overview

Lithium battery slitting machine is a slitting machine that can accurately cut battery materials (positive, negative, and spacing materials). Cut the rolled electrode strip into the required length and width for battery assembly according to different battery models, ensuring that there are no burrs during cutting. The function of the slitting machine is to cut the rolled polar plates to the required width, which is the key process before winding. Low end slitting machines have low mechanical accuracy and simple tension control, which cannot adapt to the slitting of ultra-thin film materials.
