Abstracts

Lithium battery tabs are metal conductors that extend from the positive and negative electrodes of the soft-pack core. The battery is divided into positive and negative electrodes. The positive tabs are usually made of aluminum, while the negative tabs are made of nickel or copper-plated nickel. They are both made of a composite of a film and a metal strip. The film is the insulating part of the tab, and its main function is to prevent a short circuit between the metal strip and the aluminum-plastic film when the battery is packaged. The selection of lithium battery tabs will be determined by the battery type, power requirements, cost considerations, and requirements of specific applications. Different battery tab materials have their own advantages and scope of application, and need to be selected by comprehensively considering conductivity, corrosion resistance, weldability, and cost factors. There are three types of lithium battery tabs: aluminum, nickel, and nickel copper. Nickel tabs are mainly used for consumer lithium batteries; copper-plated nickel tabs are mainly used for power lithium batteries. From the perspective of product type, aluminum tabs account for a large proportion, accounting for about 47%. The downstream of lithium battery tabs is mainly used for soft-pack batteries. The main global soft-pack battery companies are LG Chem, SKI, and Farasis Energy. From the perspective of product application, electric vehicle lithium batteries are the largest application, accounting for 72% of the share. New energy vehicles are one of the important driving factors of the industry. Global electric vehicles continue to grow rapidly. In 2023, global new energy vehicle sales will reach 14.65 million units, a year-on-year increase of 35.4%, of which China's new energy vehicle sales will reach 9.49 million units, accounting for 64.8% of global sales. Electric vehicles have become the mainstream trend of future automotive development. As new energy vehicles are currently in a long-term upward trend in the industry, the power lithium battery tabs used in the industry benefit from this and have broad market prospects. The global lithium battery tab production areas are mainly distributed in China, Japan and South Korea.

The leading companies include SUMITOMO ELECTRIC, Shanghai Tokuen, NEPES, CLAVIS Corporation, Zhejiang Tony Electronic, Jiangsu Jiulan New Energy, Soulbrain, POLE and ELCOM CO, among which the top 5 companies have a share of nearly 46%.

The global Lithium Battery Tabs market size was estimated at USD 912.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
