The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Bromide Absorption Chiller competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Lithium Bromide Absorption Chiller production reached approximately 53.5 million units, with an average global market price of around US\$ 160k per unit. A lithium bromide absorption chiller is a thermally driven cooling system that uses heat sources such as steam, hot water, or natural gas combustion instead of electricity to provide cooling. Its operation is based on the absorption and release of water vapor by a lithium bromide solution. Compared with conventional compression chillers, it offers advantages such as high energy efficiency, low noise, and zero refrigerant emissions. Widely applied in central air-conditioning systems, hospitals, hotels, data centers, and industrial facilities, it is especially suitable for utilizing waste heat or renewable energy, making it an essential technology for energy conservation and sustainable building applications. The upstream suppliers of lithium bromide absorption chillers include suppliers of raw materials and components such as copper tubes, steel plates, lithium bromide solution, vacuum pumps, heat exchangers, and control systems. Major suppliers include Hitachi Metals, Baosteel, and Mitsubishi Materials. Midstream companies such as Ebara and Carrier are primarily responsible for complete system design, system integration, and manufacturing. Downstream applications encompass commercial buildings, industrial refrigeration, district energy centers, hospitals, and research institutions. The entire industry chain demonstrates a collaborative development trend, from precision manufacturing to energy-saving services. The annual production capacity of a single-line Lithium Bromide Absorption Chiller is approximately 650 units, with a gross profit margin of approximately 18%?28%.

The global Lithium Bromide Absorption Chiller market size was estimated at USD 8567.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
