Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Button Cell competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A lithium button cell is a small, round, and flat battery that uses lithium metal or lithium compounds as the anode material. Known for its high energy density, long shelf life, and stable performance, it is widely used in space-constrained electronic devices. Lithium button cells are categorized into primary (non-rechargeable, e.g., CR series) and rechargeable types (e.g., LIR, ML, VL series), and are commonly found in remote controls, watches, medical instruments, sensors, and wearable electronics. Key advantages include low self-discharge, wide operating temperature range, and extended service life. In 2024, the global production of lithium button cells is approximately 8.55 billion units, with an average price of USD 0.41 per unit. Lithium button cells have become a vital component in compact power applications, with increasing penetration across wearables, smart sensors, medical devices, and automotive electronics. Based on company filings and government data, primary lithium button cells (e.g., CR series) continue to dominate the global market, while rechargeable types (e.g., LIR, ML, VL) are experiencing faster growth and are poised to replace disposables in many applications. Driven by the proliferation of IoT endpoints, the miniaturization and long-battery-life demands of consumer electronics, and tightening regulations against disposable batteries, we forecast a compound annual growth rate (CAGR) of 6%–8% over the next five years. With advantages such as high energy density, low self-discharge, and wide operating temperature range, lithium button cells are increasingly favored in high-value applications like medical, military, and precision electronics.

The global Lithium Button Cell market size was estimated at USD 3506.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
