## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Complex Soap Greases competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lithium complex soap grease is a high-performance grease formulated with lithium complex soap as thickener and mineral oil or synthetic oil as base oil. It has better high temperature resistance, shear resistance and water resistance than ordinary lithium soap grease. Its thickening system is usually composed of lithium soap and added organic acid or inorganic acid salt, which raises its dropping point to above 260°C and maintains good structural stability and lubrication effect under high temperature and heavy load conditions. Lithium complex grease is suitable for industrial bearings, automotive wheels, motors, heavy-duty equipment and high-temperature mechanical systems, and is widely used in metallurgy, mining, automobiles, wind power, papermaking and other industries. Its excellent adhesion and antioxidant ability also make it perform well in high-speed or water-rich environments. It is one of the most widely used high-temperature multi-purpose greases.

The global Lithium Complex Soap Greases market size was estimated at USD 2110.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
