Abstracts

Lithium extraction and refining refer to the processes involved in obtaining lithium from its natural sources and purifying it for industrial use. Extraction typically involves mining lithium-rich minerals, such as spodumene, or extracting lithium from brine deposits found in salt flats. The refining process involves several stages, including crushing and grinding the ore, using chemical methods to separate lithium from other elements, and converting it into high-purity lithium compounds like lithium carbonate or lithium hydroxide. These refined lithium products are essential for manufacturing batteries, particularly for electric vehicles and various electronic devices, making efficient and sustainable extraction and refining processes critical for meeting growing global demand. The lithium extraction and refining market is experiencing significant growth driven by the increasing demand for electric vehicles (EVs) and renewable energy storage solutions. Major sales regions include North America, Europe, and Asia-Pacific, particularly China, which dominates both production and consumption. Market opportunities are abundant as advancements in battery technology and supportive government policies encourage investment in lithium extraction. However, challenges such as environmental concerns, water usage in extraction processes, and geopolitical tensions affecting supply chains present hurdles. Additionally, the market faces pressure to innovate and adopt sustainable practices to mitigate the environmental impact of lithium mining.

The global Lithium Extraction and Refining market size was estimated at USD 37439.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.60% during the forecast period.
