The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Extreme Pressure Anti-Wear Grease competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lithium extreme pressure anti-wear grease is a type of high-load lubricating material that uses lithium soap as a thickener and adds special extreme pressure additives (such as sulfides, phosphates, molybdenum disulfide, etc.). It is specially used for mechanical parts that are subjected to high loads, strong impacts or boundary lubrication conditions. This type of grease has good thermal stability, water wash resistance, shear stability and anti-wear properties, and can provide long-term and stable lubrication protection in rolling bearings, gears, universal joints, heavy-load pins and other parts. It is especially suitable for heavy machinery, mining equipment, agricultural vehicles, port hoisting systems and other environments with complex working conditions and the need to prevent metal contact wear. It is one of the most commonly used and cost-effective extreme pressure grease types in industrial lubrication scenarios. The standard operating temperature range is usually between 20°C and 140°C, and it can withstand instantaneous impact loads of 3000-5000 psi.

The global Lithium Extreme Pressure Anti-Wear Grease market size was estimated at USD 1207.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
