Abstracts

Lithium hexafluorophosphate (LiPF₆) is a white crystalline compound widely used as the primary lithium salt in electrolytes for lithium-ion batteries. It dissolves readily in organic carbonate solvents such as ethylene carbonate (EC), dimethyl carbonate (DMC), and diethyl carbonate (DEC), forming a stable ionic medium that enables efficient lithium-ion transport between electrodes. LiPF₆ offers a good balance of ionic conductivity, electrochemical stability, and compatibility with common electrode materials. However, it is sensitive to moisture and can decompose to produce toxic byproducts like hydrogen fluoride (HF), so it requires careful handling and storage. Its performance has made it the industry standard for high-energy-density rechargeable battery systems used in electronics, electric vehicles, and energy storage applications. The global lithium hexafluorophosphate (LiPF₆) market is highly consolidated, with the top three manufacturers—Tinci Materials, DuoFuDuo, and TONZE New Energy—collectively dominating 64.07% of the market revenue share (29.76%, 21.47%, and 12.84%, respectively). This concentration reflects the competitive advantages of leading Chinese firms in cost control, vertical integration, and technological maturity, which have solidified their dominance amid intense industry consolidation.

The global Lithium Hexafluorophosphate market size was estimated at USD 1929.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.30% during the forecast period.
