Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium-ion Battery BMS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Lithium-ion Battery BMS production reached approximately 11,567.7 K units, with an average global market price of around US\$ 310 per unit. The lithium-ion battery BMS is specially designed to protect the safety of the battery, which can effectively avoid overheating, overcharging, overdischarging, and overtemperature. Therefore, in large-scale lithium battery applications, the application of battery protection and battery management systems (BMS) is crucial. In the supply chain of Lithium - ion Battery BMS, the upstream is primarily populated by suppliers of essential components and materials. IC manufacturers play a crucial role, providing specialized chips for functions such as voltage and current monitoring, communication protocols, and control algorithms, with companies like Texas Instruments and Analog Devices being key players in supplying high - quality ICs. Suppliers of passive components, including resistors, capacitors, and inductors, are also part of the upstream. These components help in signal conditioning, power filtering, and overall circuit stability within the BMS. Additionally, PCB manufacturers supply the printed circuit boards on which the BMS circuitry is mounted, ensuring reliable electrical connections and mechanical support. Downstream, Lithium - ion Battery BMS is extensively utilized by battery pack manufacturers, such as CATL and BYD. These companies integrate the BMS into their battery packs, which are then supplied to a wide range of end - users. In the automotive sector, electric vehicle (EV) manufacturers like Tesla, NIO, and Xpeng rely on BMS - equipped battery packs to ensure the safe and efficient operation of their vehicles' power systems, controlling charging and discharging processes, and monitoring battery health. In the energy storage domain, companies involved in grid - scale energy storage

projects and residential energy storage solutions also use BMS - integrated battery packs. For instance, Tesla's Powerwall for home energy storage and large - scale battery installations by companies like Fluence use BMS to manage the performance and longevity of the lithium - ion batteries. Moreover, consumer electronics manufacturers, in products like laptops, smartphones, and power banks, also incorporate BMS - enabled battery modules to enhance the safety and lifespan of their products' power sources.

The global Lithium-ion Battery BMS market size was estimated at USD 3586.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.60% during the forecast period.
