Abstracts

Lithium-ion Battery Inspection refers to a set of methods used to evaluate the properties, quality, and safety of batteries without causing any damage to them. This is crucial for ensuring the reliability and performance of batteries, especially in applications where safety and longevity are paramount, such as in electric vehicles, etc.1.

Advancements in High-Precision and Multi-Parameter TestingFuture lithium-ion battery testing will evolve toward higher resolution, multi-parameter, and full-process inspection. Beyond traditional capacity, internal resistance, voltage, and visual checks, advanced technologies like X-ray, ultrasonic, thermal imaging, and electrochemical impedance spectroscopy (EIS) will be integrated. This enables early detection of internal cell defects, bubbles, short circuits, and material inconsistencies, enhancing product safety and consistency.2. Automation, Intelligence, and In-line InspectionWith rapid battery production growth, future inspection systems will evolve toward full automation, intelligence, and in-line capabilities. Machine vision, AI algorithms, and big data analytics will enable defect classification, trend prediction, and closed-loop quality control. This supports real-time pass/fail determination on production lines, reduces manual intervention, and boosts inspection efficiency and production throughput.3. Standardization and Application Scenario ExpansionFuture lithium battery inspection will extend beyond manufacturing to encompass recycling, reuse, electric vehicle operation, and energy storage system maintenance. Concurrently, inspection standards and evaluation systems will become more unified and internationalized, forming a comprehensive quality assurance system covering the entire battery lifecycle. This will meet the stringent safety requirements of the new energy market and intelligent application scenarios.

The global Lithium-ion Battery Inspection market size was estimated at USD 159.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

15.50% during the forecast period.
