Abstracts

Lithium ion battery packs are rechargeable energy storage systems composed of multiple individual lithium ion cells connected in series or parallel configurations, managed by a battery management system (BMS) that monitors and balances voltage, temperature, and current to ensure safety, performance, and longevity. These packs are designed to provide higher voltage, capacity, and power output than single cells, making them suitable for a wide range of applications from consumer electronics and electric vehicles to renewable energy storage and industrial equipment. Key characteristics include high energy density, relatively low self-discharge rates, and the ability to undergo numerous charge-discharge cycles, though their performance and safety are highly dependent on cell chemistry, design quality, and operational conditions.

The global Lithium Ion Battery Pack market size was estimated at USD 180.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.30% during the forecast period.
