Abstracts

Lithium battery slot die is a crucial component in the production process of lithium-ion batteries. Its main function is to evenly and accurately coat the positive and negative electrode material slurries on the current collector (such as aluminum foil or copper foil) to form an electrode sheet. The Slot Die usually contains a precision-designed slit inside. When the slurry containing active substances passes through the die, the coating thickness is adjusted by controlling the opening size of the slit and the distance from the substrate. Slot Die performs continuous or intermittent coating operations on the current collector as the coating machine moves. Global key players of Lithium Ion Battery Slot Die include Panasonic, Shenzhen Manst, MMC RYOTEC, etc. The top three players hold a share over 78%. Asia-Pacific is the largest market, with a share about 77%. In terms of product type, Fully Automatic Adjust Slot Die is the largest segment, occupied for a share of 93%. In terms of application, Automotive LIB is the largest, which has a share about 64 percent.

The global Lithium Ion Battery Slot Die market size was estimated at USD 377.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.40% during the forecast period.
