Report Overview

A lithium-ion cell is a type of rechargeable battery in which lithium ions move from the negative electrode to the positive electrode during discharge and back when charging. Li-ion cells use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery. The electrolyte, which allows for ionic movement, and the two electrodes are the constituent components of a lithium-ion battery cell.

The lithium ion cell and battery pack market is gaining momentum as lithium-ion batteries offer advantages of higher efficiency and longer lifespan over other batteries such as lead acid ones. The rising demand for electronics with improved battery life and superior performance is expected to stir demand for lithium-ion batteries among manufacturers of consumer electronics. This is because lithium-ion batteries satisfy the demand for high power density needed by handheld devices for wireless data transmission and brighter resolution.
