Report Overview

A lithium-ion battery or Li-ion battery is a type of rechargeable battery in which lithium ions move from the negative electrode to the positive electrode during discharge and back when charging. Li-ion batteries use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery. The electrolyte, which allows for ionic movement, and the two electrodes are the constituent components of a lithium-ion battery cell. Cells with a cylindrical shape are made in a characteristic 'swiss roll' manner, which means it is a single long sandwich of positive electrode, separator, negative electrode and separator rolled into a single spool. The main disadvantage of this method of construction is that the cell will have a higher series inductance.

Panasonic(Sanyo), Samsung SDI, LG Chem are the leaders of the 18650 Lithium Battery industry, which take about 80% market share. Asia-Pacific is the major region of the global market, which takes about 70% market share.

The Global Lithium-Ion Rechargeable Battery Market Size was estimated at USD 6353.08 million in 2021 and is projected to reach USD 7115.37 million by 2028, exhibiting a CAGR of 1.63% during the forecast period.
