### Report Overview

A lithium-ion battery separator is a thin, permeable membrane that acts as a physical barrier between the positive (cathode) and negative (anode) electrodes in a lithium-ion battery. It is one of the most important components in a lithium-ion battery. The separator ensures that the electrodes do not touch each other and prevents short-circuiting within the cell. It is supposed to allow the smooth flow of lithium ions from the cathode to the anode during charging and from the anode to the cathode during discharge.
