Report Overview

Lithium metal is considered the 'dream material' for batteries. That's because among known solid materials, it has the highest energy density, meaning that batteries could run twice as long and hold more energy than the ubiquitous lithium-ion batteries that power most modern-day electronics. In a lithium-metal battery, the shuttling lithium ions simply form pure metallic lithium on the anode side. But the lithium has a tendency to form branching needle-like structures called dendrites that can pierce through to the cathode, causing the battery to short.

The global Lithium Metal Battery market size was estimated at USD 91 million in 2023 and is projected to reach USD 125.11 million by 2032, exhibiting a CAGR of 3.60% during the forecast period.

North America Lithium Metal Battery market size was estimated at USD 25.20 million in 2023, at a CAGR of 3.09% during the forecast period of 2024 through 2032.
